IZDELAVA RAČUNALNIŠKEGA PROGRAMA ZA PODPORO DELOVANJA PODJETJA, KI SE UKVARJA Z UVOZOM RABLJENIH VOZIL

POVZETEK

Avtomobil je sredstvo, ki služi za prevoz ljudi ali tovora. V današnjih časih si življenje brez avtomobila težko predstavljamo, zato je izbira ustreznega vozila pomembna odločitev.

Diplomska naloga služi kot podpora za novoustanovljeno podjetje, ki se bo ukvarjalo z nakupom in prodajo rabljenih vozil v tujini in doma, za kar je potrebno dobro poznati zakonodajo, ki predpisuje, kakšna in katera vozila je možno uvoziti oziroma kupiti.

Modeliranje poslovnega procesa je v današnjih časih zelo pomembno. Stanje pred ustanovitvijo podjetja moramo dobro preučiti, poiskati posodobitve in najboljše rešitve, ki nam bodo prinesle večji zaslužek v podjetju, hkrati pa biti z izbrano ponudbo boljši od konkurence.

Zahteve kupcev oziroma naročnikov so postale vse večje, kar sili podjetje k točnosti podatkov in odličnostjo na vseh segmentih. Točnost je nujna za ocenitev višine stroškov, na podlagi katere se kupec odloči za nabavo. Za potrebe podjetja bo izdelan računalniški program, ki ob vnosu potrebnih podatkov v kratkem času izračuna strošek nakupa rabljenega vozila.

V današnjem času internetnih domen je smiselno izdelati lastno spletno stran, ki bo ponujala kupcu kar največ informacij, vezanih na stroške in cene. Kupec lahko tako izbira način nakupa.

Ključne besede: modeliranje poslovnega procesa, program za izračun stroškov, izdelava spletne strani

DEVELOPMENT OF THE COMPUTER FOR COMPANY SUPPORT TO IMPORT USED CARS

SUMMARY

The car is a multipurpose thing which is used to transport people or cargo. Today's times require the need for a car, so it is necessary to purchase only the appropriate vehicle and also think about what the vehicle will serve for.

The thesis in diploma will serve as a support for the new company, to be engaged with the purchase of used vehicles at home and abroad. For the operation of the company it is important to know good the laws that regulate what and which vehicles can be imported or purchased.

Business process modeling is nowadays needed as the current situation in the company is studied and searched for updates, which can provide higher earnings in the company and ahead of the competition we will be better with own idea and offer.

Requirements of customers and subscribers have been increased, which forces companies to accuracy and excellence in all segments. Accuracy is essential to assess the level of costs on the basis of which the buyer decides to purchase. Other segments will provide excellent knowledge of bodywork and engine of the vehicle. For the purposes of the company a computer program will be created.

In today's world of Internet domain there is definitely a sense to create own webpage, which will offer to the buyer several information related to the costs and prices. Then, the customers decide or visit the company, which has all the necessary on-site or purchase it alone.
